

## 2014-2015 Columbus & Franklin County Seasonal Influenza Activity Weekly Summary (Week 53, Dec. 28<sup>th</sup>, 2014– Jan. 3<sup>rd</sup>, 2015)

### Highlights

- In week 53 of 2014, local indicators of influenza activity decreased compared to week 52 but continue to be at elevated levels (local influenza activity indicators continue to be above their baseline values for the week and season).
- Geographic activity and local intensity designation (Click [here](#) for definitions) = WIDESPREAD, HIGH
- Local medical facility labs reported 2,923 tests run with 598 (20.5%) positive results for week 53 of 2014.
- The percentage of ED visits for influenza-like-illness (ILI) and respiratory symptoms decreased in week 53 but are still substantially higher than their respective weekly baseline averages.
- In week 53 of 2014, local over-the-counter medication sales decreased (decrease in cough and cold, electrolyte, thermometer, chest rubs, adult anti-fever, pediatric anti-fever sales, and throat lozenge sales) compared to last week.
- Nationally, influenza activity continued at elevated levels in week 53. Please [visit the CDC website for specific information](#) (National data is usually updated on Friday of each week).

### Local Flu Activity Dashboard (All data are preliminary and may change as updated reports are received.)

<sup>1</sup>Interpret with caution. Indicators with small numbers subject to large weekly percentage fluctuations.

<sup>2</sup>Number of weeks "▲" = Increase (>2%), "▼" = Decrease (>2%), "•" = Stable (-2% to +2%).

<sup>3</sup>Black line is current years data. Based on data availability, red line is historical average (excluding pandemic year).

<sup>4</sup>Data Source: athenaHealth, Inc. and their analytics and research team athenaResearch (www.athenahealth.com). Rate of ILI visits to Franklin County, OH, athenaHealth network's primary care practices/physicians using claims data.

<sup>5</sup>Data Source: Google Flu Trends (www.google.org/flutrends), City = Columbus, OH. See website for additional details.

<sup>6</sup>Franklin County, OH residents only (based on zipcode).

<sup>7</sup>Confirmed cases only. Based on jurisdiction equal to Franklin County or City of Columbus and admission date available in ODRS.

### CDC 122-Cities Mortality Reporting System: Pneumonia and Influenza (P&I) Mortality

In week 53 of 2014, 6.4% of all Columbus deaths were attributed to pneumonia and influenza (Figure 1). Nationally, 7.0% of deaths reported were attributed to pneumonia and influenza in week 53. This national percentage is above the national epidemic threshold of 6.9% for week 53.

### Influenza Morbidity and Influenza-Like Illness (ILI) Reports

In week 53, the preliminary local influenza-like-illness (ILI) visit rate (27.7 per 1,000 visits) to athenaHealth providers was lower than the previous week but is still substantially higher than the baseline average for the past several weeks (Figure 1). The week 53 percentage of Emergency Department (ED) visits for ILI symptoms decreased compared to the previous week (Figure 3) but is still substantially higher than the historic baseline for the weeks. Pediatric urgent care visits for ILI symptoms also decreased compared to the previous week but is still substantially higher than the historic baseline for the week.

Nationally, during week 53 of 2014, 5.6% of patient visits reported through the US Outpatient Influenza-like Illness Surveillance Network (ILINet), were due to influenza-like illness (ILI). The percentage is higher than the national baseline of 2.0%.

### Laboratory Surveillance

During week 53 of 2014, reporting Franklin County sentinel medical facility laboratories tested 2,923 specimens, with 598 (20.5%) positive (Figure 4). The total number of tests done by local reporting labs from week 35 of 2012 through week 53 of 2014 is 21,565 with 3,665 (17.7%) positives (3,653 type A, 139 type B, 12 both A and B, 3 type unknown).

Nationally in week 53 of 2014, WHO and NREVSS laboratories reported 30,469 specimens tested for influenza viruses, 7,515 (24.7%) of which were positive (visit the CDC website for more info). The last 3 weeks available national breakdown by type and subtype from the CDC is shown in Table 1 below:

**Table 1: U.S. Virologic Surveillance (WHO and NREVSS participating labs)**

Week	A Total	A (H1)	A 2009 H1N1	A (H3)	A (H3N2v)	A (unable to sub-type)	A (Subtyping not performed)	B Total	Total # Tested	% Positive
51	9814 (97.1%)	0 (0%)	15 (0.2%)	4005 (40.8%)	0 (0%)	0 (0%)	5794 (59%)	298 (2.9%)	33402	30.27
52	10778 (96.9%)	0 (0%)	12 (0.1%)	3670 (34.1%)	0 (0%)	0 (0%)	7096 (65.8%)	350 (3.1%)	35288	31.53
53	7218 (96%)	0 (0%)	8 (0.1%)	2486 (34.4%)	0 (0%)	0 (0%)	4724 (65.4%)	297 (4%)	30469	24.66

ODH lab reported results for Ohio cases that are PCR positive for seasonal influenza Positive results: (1) A/PdH1N1; (504) A/H3N2; (7) Influenza B (through 01/04/15).

### ED and Pediatric Urgent Care Respiratory Visits

In the 53<sup>rd</sup> week of 2014, the percentage of all ED visits categorized as *respiratory* decreased compared to the percentage seen the previous week but is still substantially higher than its historic baseline for the week (Figure 5). Pediatric urgent care visits for respiratory symptoms also decreased compared to the previous week but is still substantially higher than its historic baseline for the week.

### Over-the-Counter (OTC) Medication Sales and Antiviral Prescriptions

In week 53 of 2014, the majority of local over-the-counter medication sales increased (increase in cough and cold, electrolyte, chest rubs, adult anti-fever, and pediatric anti-fever sales; decrease in thermometer and throat lozenge sales) compared to last week.
